PRECAUTIONS

1. The lead pitch of the LED must match the pitch of the mounting holes on the PCB during component placement. Lead-forming may be required to insure the lead pitch matches the hole pitch. Refer to the figure below for proper lead forming procedures.

"O" Correct mounting method "X" Incorrect mounting method

2. During soldering, component covers and holders should leave clearance to avoid placing damaging stress on the LED during soldering.

3. The tip of the soldering iron should never touch the lens epoxy.
4. Through-hole LEDs are incompatible with reflow soldering.
5. If the LED will undergo multiple soldering passes or face other processes where the part may be subjected to intense heat, please check with Kingbright for compatibility.
6. Recommended Wave Soldering Profile for Kingbright Thru-Hole Products

Notes:

1. Recommend the solder wave peak temperature kept between 245~260°C. The maximum soldering temperature should not exceed 260°C.
2. Do not apply stress to the epoxy body while the temperature is above 85°C.
3. During the wave soldering process, the preheat temperature must not exceed 100°C.
4. Fixtures should not place stress on the component when mounted.
5. No more than one soldering pass.
