

PROTECTION PRODUCTS - EMIClamp™

Description

The EClamp™2522P is an easily implemented solution for protection and termination of low speed or full speed Universal Serial Bus (USB) ports. Each device will provide termination, filtering, and ESD protection for one upstream USB port on cellular phones and other portable electronics. This state-of-the-art device utilizes solid-state silicon-avalanche technology for superior clamping performance and electrical characteristics.

Line termination is achieved with 22 Ohm series resistors on both the D+ and D- USB lines. TVS diodes are also included on each data line for ESD protection in excess of $\pm 15\text{kV}$ (air discharge) and $\pm 8\text{kV}$ (contact discharge) per IEC 61000-4-2, level 4. An additional TVS diode connection is included for protection of the voltage (VBus) bus. The 1.5k Ohm pull-up resistor is included on one of the USB data lines to identify the equipment as either a full-speed (connected to D+ line) or low-speed (connected to D- line) device.

The EClamp2522P is in a 6-pin, RoHS compliant, SLP1616P6 package. It measures 1.6 x 1.6 x 0.60mm. The leads are spaced at a pitch of 0.5mm and are finished with lead-free NiPdAu. The small package makes it ideal for use in portable electronics such as cell phones and digital still cameras.

Circuit Diagram

Features

- ◆ Bidirectional EMI/RFI filter with integrated TVS for ESD protection
- ◆ ESD protection to **IEC 61000-4-2 (ESD) Level 4, $\pm 15\text{kV}$ (air), $\pm 8\text{kV}$ (contact)**
- ◆ TVS working voltage: 5.25V
- ◆ Termination Resistor: 22 Ohms
- ◆ Capacitance: 45pF (Max at VR = 0V)
- ◆ Protection and filtering for one USB port
- ◆ Solid-state technology

Mechanical Characteristics

- ◆ SLP1616P6 6L package
- ◆ RoHS/WEEE Compliant
- ◆ Nominal Dimensions: 1.6 x 1.6 x 0.60 mm
- ◆ Lead Finish: NiPdAu
- ◆ Molding compound flammability rating: UL 94V-0
- ◆ Marking : Marking code + date code
- ◆ Packaging : Tape and Reel per EIA 481

Applications

- ◆ USB Ports
- ◆ Cellular Handsets
- ◆ PDAs
- ◆ PC Peripherals
- ◆ MP3 Players

Device Connection

The EClamp2522P is designed to provide termination, EMI filtering and ESD protection for one USB port. The device is connected as follows:

- 1. Full-Speed Devices:** For full-speed devices the pull-up resistor is connected to the D+ line. Route the D+ line from the connector to pin 2. Pin 5 is connected to the D+ line of the IC. Route the D- line from the connector to pin 3. Pin 4 is connected to the D- line of the IC. Pin 1 is connected to the voltage supply line (V_{BUS}). Pin 6 is connected to the 3.3 Volt supply. The ground connection is made to the center tab. For best results, use multiple vias to the ground plane to reduce parasitic inductance.
- 2. Low-Speed Devices:** For low speed devices the pull-up resistor is connected to the D- line. Route the D- line from the connector to pin 2. Pin 5 is connected to the D- line of the IC. Route the D+ line from the connector to pin 3. Pin 4 is connected to the D+ line of the IC. Pin 1 is connected to the voltage supply line (V_{BUS}). Pin 6 is connected to the 3.3 Volt supply. The ground connection is made to the center tab. For best results, use multiple vias to the ground plane to reduce parasitic inductance.

USB Port Design Considerations

The Universal Serial Bus (USB) specification requires termination and filtering components for proper operation. In addition, an open USB socket is vulnerable to hazardous ESD discharges in excess of 15kV. These discharges can occur on the data lines or the voltage bus. The EClamp2522P is an easily implemented solution that is designed to meet the termination and EMI filter requirements of the USB specification for low speed and full speed devices. It also provides ESD protection to IEC 61000-4-2, level 4.

USB line termination is achieved with series resistors on both the D+ and D- lines. These resistors preserve signal integrity by matching the cable impedance to that of the differential driver. A 1.5k Ω pull-up resistor is used to identify an upstream port on either the D+ (full speed devices) or the D- (low speed devices) data line. TVS diodes provide ESD protection of both (D+ and D-) data lines and the voltage bus (V_{BUS}). This integrated solution simplifies design and requires minimal board space.

**Figure 1 - Pin Identification and Configuration
(Top Side View)**

Pin	Symbol	Identification
1	VBus	5.25V VBus ESD Protection
2	DM In	USB data input with termination resistor
3	DP In	USB data input with termination resistor
4	DP Out	USB data output with termination resistor
5	DM Out	USB data output with termination resistor
6	V_{Term}	1.5k Ohm pull-up resistor
Center Tab	GND	Ground connection
